DAY SIGNALS.

1. CAUTIONARY.—BAY OF BENGAL.—The square flag W of the International Code, hoisted at the storm signal staff, indicates the existence of disturbed squally weather in the Bay of Bengal, which may be the first stage in the formation of a cyclonic storm, and which, if it develops, is likely to affect that part of the coast on which the port, where the signal

Arabian Sea.—The square flag W of the International Code, hoisted at the storm signal staff, indicates the existence of disturbed weather off the west coast of India near the port or ports where the signal is shown; or the advance of a cyclonic storm across Hindustan from the Bay of Bengal, which may shortly give squally or stormy weather in the Arabian

In either of the above cases if the disturbed conditions pass away without producing stormy weather, the cautionary signal is hauled down; but if the disturbed weather will probably develop into a cyclone, signals indicating the probable position, character, and tract

of the approaching storm are shown as follows.

2. Warning Signal.—A ball indicates that a cyclonic storm has formed, which will probably reach the port where the signal is shown, but is still at a considerable distance

The same signal will also be shown at more important ports on the west coast of India, to indicate that a storm has formed in the Arabian sea at some distance from the coast and will shortly cross one or other of the track of vessels leaving those ports, but will not reach such ports. The Port officer will receive details to communicate to vessels leaving the port.

3. Danger Signals.— (a) A cone, apex downwards, indicates that a cyclonic storm, probably slight to moderate, is affecting the port, and that its centre will probably cross the coast considerably to the southward.

- (b) A cone, apex upwards, indicates that the centre of such a storm, as above (3 a), will probably cross the coast considerably to the northward.
- (c) A drum indicates that the centre of such a storm as above (3 a) will probably cross the coast over or near the port.
- 4. Great Danger Signals.—(a) A cone, apex downwards, over a ball, indicates that a cyclonic storm of great intensity is affecting the port and that its centre will probably cross the coast considerably to the southward.
 - (b) A cone, apex upwards, over a ball, indicates that the centre of such a storm as above (4 a) will probably cross the coast considerably to the northward.
 - (c) A drum, over a ball, indicates that the centre of such a storm as above (4 a) will probably cross the coast over or near the port.

NIGHT SIGNALS.

- 1. No cautionary signals are shown at night.
- 2. A red light indicates similarly to warning signal (2) above.
- 3. (a) A red light placed vertically over a white light indicates similarly to danger signal 3 a above.
 - (b) A white light placed vertically over a red light indicates similarly to danger signal 3 b above.
 - (c) Two red lights, placed vertically, indicate similarly to danger signal 3 c above.
- 4. (a) Two red lights placed vertically over a white light indicate similarly to great danger signal 4 a above.
 - (b) A white light over two red lights placed vertically, indicates similarly to great danger signal 4 b above.
 - (c) Three red lights, placed vertically indicate similarly to great danger signal 4 c above.

A depth of 14 fathoms was found between this rock and the entrance of Dring harbour, and as there may possibly be less water, breakers having been reported in that locality, the words "Breakers reported" have been written on the Chart between the above rock and Dring harbour.

A shoal, with a depth of 2½ fathoms on it, apparently not examined, situated in Kondul harbour, north coast of Great Nicobar, in a position with summit of Kondul island (400), bearing N. 35° W., distant 1,70 miles; and village on east side of harbour N. 71° E.

Approximate position, lat. 7° 11′ 45" N., long. 93° 42′ 35" E.

3. A patch of small extent, with a least depth of $4\frac{1}{2}$ fathoms obtained on it, but possibly there may be less water, situated on the west side of Great Nicobar, in a position with the south-west extreme of the western point of Casuarina bay, bearing N. 30° W., distant $2\frac{3}{4}$ miles; and Kopenheat point S. 83° E.

Alterations in storm signals at ports of India.

The British Admiralty has given notice (No. 182 of 1898) that the undermentioned system of storm signals is being adopted for all the ports of India, with the exception of those in the river Hooghly, and with that exception the previous systems have been discontinued:—

DAY SIGNALS.

1. Cautionary.—Bay of Bengal.—The square flag W of the International Code, hoisted at the storm signal staff, indicates the existence of disturbed squally weather in the Bay of Bengal, which may be the first stage in the formation of a cyclonic storm, and which, if it develops, is likely to affect that part of the coast on which the port, where the signal is shown, is situated.

Arabian Sea.—The square flag W of the International Code, hoisted at the storm signal staff, indicates the existence of disturbed weather off the west coast of India near the port or ports where the signal is shown; or the advance of a cyclonic storm across Hindustan from the Bay of Bengal, which may shortly give squally or stormy weather in the Arabian sea.

In either of the above cases if the disturbed conditions pass away without producing stormy weather, the cautionary signal is hauled down; but if the disturbed weather will probably develop into a cyclone, signals indicating the probable position, character, and tract of the approaching storm are shown as follows.

of the approaching storm are shown as follows.

2. Warning Signal.—A ball indicates that a cyclonic storm has formed, which will probably reach the port where the signal is shown, but is still at a considerable distance

The same signal will also be shown at more important ports on the west coast of India, to indicate that a storm has formed in the Arabian sea at some distance from the coast and will shortly cross one or other of the track of vessels leaving those ports, but will not reach such ports. The Port officer will receive details to comprehense to vessels leaving the port.

such ports. The Port officer will receive details to communicate to vessels leaving the port.

3. Danger Signals.—(a) A cone, apex downwards, indicates that a cyclonic storm, probably slight to moderate, is affecting the port, and that its centre will probably cross the coast considerably to the southward.

- (b) A cone, apex upwards, indicates that the centre of such a storm, as above (3 a), will probably cross the coast considerably to the northward.
- (c) A drum indicates that the centre of such a storm as above (3 a) will probably cross the coast over or near the port.
- 4. Great Danger Signals.—(a) A cone, apex downwards, over a ball, indicates that a cyclonic storm of great intensity is affecting the port and that its centre will probably cross the coast considerably to the southward.
 - (b) A cone, apex upwards, over a ball, indicates that the centre of such a storm as above (4 a) will probably cross the coast considerably to the northward.
 - (c) A drum, over a ball, indicates that the centre of such a storm as above (4 a) will probably cross the coast over or near the port.

NIGHT SIGNALS.

1. No cautionary signals are shown at night.

2. A red light indicates similarly to warning signal (2) above.

3. (a) A red light placed vertically over a white light indicates similarly to danger signal 3 a above.

(b) A white light placed vertically over a red light indicates similarly to danger signal 3 b above.

(c) Two red lights, placed vertically, indicate similarly to danger signal 3 c above.

4. (a) Two red lights placed vertically over a white light indicate similarly to great danger signal 4 a above.

(b) A white light over two red lights placed vertically, indicates similarly to great

danger signal 4 b above.

(c) Three red lights, placed vertically indicate similarly to great danger signal 4 c above.
